

Figure 6. Photomicrographs of D1 structures from domain A. A–B (plane and cross polarized, respectively): High-grade mylonite derived from granite composed mainly of feldspar and quartz. Shear sense is top-to-SE, inferred from the S-C fabric. Subvertical surfaces. C: High-grade mylonite derived from the granite, showing the typical fabric of dynamically recrystallized quartz formed by GBM recrystallization. Abbreviation: Bt, Biotite; Fsp, Feldspar; Qz, Quartz.
